VERDICT

Reliance edges it 5–3: stronger targets, safety, diversity and CSR scale. Adani leads on disclosure and renewable share.

For an ESG-focused investor

On current disclosures, Reliance is the lower ESG-risk holding. That would flip if Adani cut fatalities to zero while Reliance kept Scope 3 undisclosed.

Reliance should

- Disclose Scope 3 emissions, as Adani already does
- Publish a year-by-year renewable pathway: 98.6% of its energy is still non-renewable against a 2035 net-zero goal

Adani should

- Make zero fatalities a board-level KPI (6 in FY23)
- Lift women in the workforce from 9.2% towards Reliance's 12.2%

Read with care

Absolute emissions aren't compared: Reliance's Scope 1+2 (37.9M tCO_2e) is ~34× Adani Enterprises' (1.13M), so scale, not performance, drives that gap. Some figures are FY23, others FY24, as disclosed.
